### Style conventions:

- 1) If creating new concepts or editing existing concepts, reserve use of 'or', 'and' for use as Boolean operators only; avoid use mid-sentence;
  - Where an 'or' might be used, consider a forward slash '/', the words: at least one of... no greater than.... Either of..., Each of....only one of...
  - Where an 'and' might be used, consider repeating the line and use of a Boolean 'AND' operator, the words 'in combination with...' 'together with...' 'both of ...', 'at least one of:.. / / / /'
  
- 2) Treatment phase description:
  - Consider if separate phases are really needed; can continuing or grandfather treatment be combined into a single phase with initial treatment?
  - Consider consistency with Product Information language – is Initial treatment meant to be mean Induction treatment? Continuing treatment vs. Maintenance treatment
  - Consider non-linear dosing regimens – do the treatment phase descriptions align with those specified in the dosing section of the Product Information?
  - Consider if there are multiple listings and therefore multiple treatment phase descriptions for the one drug; can a prescriber quickly identify if a treatment phase relates to use in 1<sup>st</sup> line or 2<sup>nd</sup> line treatment?
  
- 3) For proposed Authority Required – delayed assessment type listings, mark in the 'Concept ID' column at least one Clinical/Treatment/Population/Prescriber instruction as 'FULL' for full assessment by Services Australia. Provide justification for non-immediate/delayed assessment of the concept. Otherwise, where no concept ID is marked for full assessment, select the Authority Required – immediate assessment restriction type if an Authority Required listing is being proposed.
